

Instrumentation & Controls Field Services

OUR SERVICE

We provide field-proven instrumentation, controls, and automation services supporting natural gas production, transmission, and distribution facilities. Our services include project engineering support, system installation, commissioning and startup, loop and point-to-point verification, troubleshooting, calibration, and ongoing operational support. We work alongside operations, engineering, and construction teams to ensure safe, reliable, and compliant systems, offering on-site technical leadership, commissioning documentation, diagnostics, and analysis to support long-term asset performance and reliability.

Equipment & Systems Supported

- Programmable Logic Controllers
- Flow Computers
- Remote Terminal Units
- Instrumentation
 - Temperature
 - Static & Differential Pressure
 - Valve Controllers & Positioners
- Meters
 - Ultrasonic
 - Coriolis
 - Orifice
 - Turbine
 - Rotary
- Gas & Process Analyzers
 - Gas Chromatograph
 - Oxygen
 - Moisture
 - H₂S
- Gas Sampling Systems
- Communication Equipment
- Uninterruptible Power Supplies
- Valve Actuators
